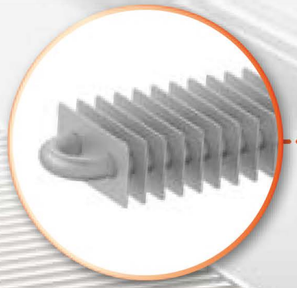
Fully electric

Fully electric trench heater equipped with a high-performance electric heat exchanger. This system ensures high heating output and fast heat transfer into the room.



Safe operation

Electric operation eliminates risks associated with the connection to the heating system and ensures maximum safety.

High heating output

Thanks to more efficient heating, costs can be reduced while increasing thermal comfort in the room.

Modern control

The multifunctional large-area LED display of the room thermostat with the option to control the convector via a mobile device on the local network.

Maximum safety

The convector is fitted with a securely fixed aluminium grille for maximum protection and reliable operation.

Primary and secondary heat source

The trench heater operates independently of the central heating system and is therefore also suitable as a secondary heat source.

Quiet, powerful, energy-efficient

New fans with EC aluminium motors provide quiet operation and energy-efficient performance.

Precise control

Reliable control ensures precise fan speed adjustment and guaranteed output.

Optional retrofit installation

It is an ideal solution for locations where connection to the heating system is not possible and therefore also allows retrofit installation, e.g. for renovations.
